the chief game. The *Goajiro* who live near the coast sometimes catch fish (with hook and line), lobsters, molluska, and crabs.

Cattle raising.—The *Goajiro* are primarily nomadic cattle raisers and, consequently, depend upon the water supply. In the rainy season they seek natural depressions, which they sometimes enlarge artificially, where the water may gather. In case of drought they wander toward the sea, where wells 30 to 40 feet (9 to 12 m.) deep are dug.

Besides cattle the *Goajiro* keep sheep, goats, horses (pl. 72, *bottom, left*), mules, pigs, and domestic fowls, which they take with them wherever they go. An estimate gives them 100,000 cattle, 200,000 sheep and goats, 20,000 horses and mules, and 30,000 donkeys. As cattle are a measure of wealth, the Indians are reluctant to kill them for food, but they utilize the milk or export the animals to Curaçao and Aruba in exchange for textiles and corn. Each tribe has its own cattle brand, and the annual round-up and branding is an occasion for great festivities. Horse races and other sports take place, and large quantities of food and drink are consumed.

Food preparation.—*Goajiro* diet consists almost entirely of meat and milk products. Goats and sheep are killed every day or two for meat, and the milk of the cows is made into butter and cheese. This diet is supplemented by yuca, cactus fruit, sugar, rice, and plantains, the last three obtained from Colombian and Venezuelan traders in exchange for skins. Meat that is not immediately consumed is suspended from tall poles, and skins are pegged to the ground and salted in preparation for sale. Butter is made by stirring the cream with a fluted stick in a calabash or wooden bucket. To make cheese, rennet is added to skimmed milk in a trough, and the curds are put in a primitive wooden cheese press, which is weighted with a heavy rock.

HOUSES AND VILLAGES

Although the *Goajiro* are of a common origin, they are divided into 6 subs ("castes" or "tribes"), each living within a rather limited area (Simons, 1885, p. 796). The subs are split into local groups, which occupy extended villages or rancherías, each with 2 to 50 houses (ranchos) and 10 to 250 or more Indians. Houses are always within gunshot distance of one another and so disposed that surprise attacks would be difficult. If a village is at all permanent, a protective cactus hedge surrounds it.

Goajiro nomadism makes elaborate houses unnecessary. Dwellings are mere lean-tos, arbors, and temporary gabled roofs supported on poles. Thatch is made from the core of the cactus, split lengthwise. Rough tables, chairs with rawhide seats, and benches are often used. The hammock is always present. House walls are often lacking, but a corner of the hut may be closed off for a girl's puberty seclusion. When mi-
